3D SECURITY TESTING SUBSCRIPTION

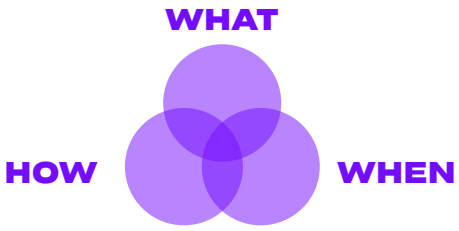

On-demand security testing, without the procurement bottleneck.

Security teams rarely struggle to find vulnerabilities. They struggle to keep pace with development velocity. Applications change weekly. Infrastructure shifts to cloud. AI-driven systems expand the attack surface. Yet most penetration testing still happens through one-off engagements.

UltraViolet Cyber's 3D Security Testing Subscription gives security teams on-demand access to penetration testing expertise and the infrastructure required to support complex testing programs. Instead of scoping individual engagements, teams draw from a flexible pool of testing capacity to assess the systems that matter most.

3D SECURITY TESTING SUBSCRIPTION

On-demand penetration testing for organizations managing large application portfolios, rapid development cycles, and recurring compliance requirements. The program is built around three variables security teams control.

1. WHAT YOU TEST

Organizations can assess any asset across their environment:

- ☑ Web and mobile applications
- ☑ APIs, web services, source code, and AI/LLM systems
- ☑ Networks, cloud infrastructure
- ☑ Architecture designs

Security leaders prioritize testing based on business risk and release cadence.

2. WHEN YOU TEST

Testing should match development velocity, not compliance calendars. With a subscription model, organizations can:

- ☑ Test new releases quickly
- ☑ Re-test after remediation
- ☑ Schedule recurring assessments
- ☑ Validate fixes throughout the year

This supports more flexible validation than annual assessments alone.

3. HOW DEEP YOU TEST

Not every system requires the same level of testing. Teams can apply the right level of effort depending on risk:

- ☑ Targeted penetration testing
- ☑ Full application security assessments
- ☑ Secure architecture reviews
- ☑ Source code analysis
- ☑ Red or purple team exercises

What You'll Get

Each 3D Subscription engagement includes:

- ➔ Access to UltraViolet penetration testing specialists
- ➔ Flexible testing allocation across multiple assets
- ➔ Rapid scheduling for new assessments and re-tests
- ➔ Formal reporting, remediation guidance, and audit-ready documentation
- ➔ Executive-level reporting and risk prioritization

WHY THE SUBSCRIPTION MODEL WORKS

- ☑ **Flexible testing allocation**
  Use testing capacity across multiple applications, environments, and security initiatives.
- ☑ **Faster testing cycles**
  Schedule testing quickly without repeated procurement and contracting processes.
- ☑ **Predictable security budgets**
  Annual subscription pricing simplifies budgeting and planning.
- ☑ **Supports ongoing compliance requirements**
  Regular testing helps organizations meet security testing requirements for frameworks such as PCI DSS, SOC 2, and NIST.
- ☑ **Scalable security coverage**
  Expand testing coverage across large application portfolios.
- ☑ **On-demand testing support**
  Test new releases and verify remediation as priorities change throughout the year.

WHY ULTRAVIOLET CYBER

Deep Application Security Experience
Extensive experience testing complex enterprise software, including web, mobile, API, and modern cloud applications.

Responsive Client Partnership
Clear communication, consistent coordination, and program support help keep testing efforts moving.

Formal Reporting That Supports Action
Detailed findings and assessment reports support remediation, internal tracking, and audit requirements.

Proven Federal & Commercial Expertise
Trusted by DHS and Fortune 500 enterprises alike, where security testing must meet high operational standards.

Flexible Engagement Models
Whether supporting recurring assessments, retesting, or broad application portfolios, we adapt to your priorities and operating model.

Application Security Programs at Scale
Built to support large testing volumes across diverse applications, environments, and testing requirements without requiring internal infrastructure investment.

REAL-WORLD RESULTS

Global Compliance Testing

A global financial institution used the 3D Security Testing Subscription to conduct more than **150 tests/retests across multiple regions,** identifying 50 security defects, and **improving coverage across 80% of its application portfolio** while meeting regulatory reporting requirements.

> **"What stands out is the combination of technical testing, program management support, and ongoing communication."**
>
> **Product Security Engineering Operations Manager**
> Global Financial Software Company

Continuously Assess. Consistently Defend.

ultraviolet

UltraViolet Cyber is a leading platform enabled unified security operations company providing a comprehensive suite of security operations solutions. Founded and operated by security practitioners with decades of experience, the UltraViolet Cyber security-as- code platform combines technology innovation and human expertise to make advanced real time cybersecurity accessible for all organizations by eliminating risks of separate red and blue teams. By creating continuously optimized identification, detection and resilience from today's dynamic threat landscape, UltraViolet Cyber provides both managed and custom-tailored unified security operations solutions to the Fortune 500, Federal Government, and Commercial clients. UltraViolet Cyber is headquartered in McLean, Virginia with global offices across the U.S. and in India
