ULTRAVIOLET CYBER

Tear down the walls between red and blue teams & address risk exposure when it's discovered–not weeks later.

It's time to end the tension, address vulnerabilities, and slash the costs of red and blue team security functions. One ecosystem. Bilateral capabilities. Customized to your needs.

Growing Alert Fatigue? Respond Faster:

Your teams are flooded with noisy alerts that have no value. With every escalation validated before your responders see it, you will mitigate security threats faster through collaboration, shared knowledge, and streamlined processes.

Money Tight? Lower Costs:

Cybersecurity resource cost growing faster than your budget? Optimize security operations, improve efficiency, enhance incident response capabilities, and adopt a proactive stance against potential threats. With unified security, you'll lower costs on Day 1.

Program Delays? Stay Agile:

More projects than time and funding? Focus your teams on the business, while we do the heavy lifting on security operations. With battle tested security playbooks, our cloud-native capabilities are powered by automation so you always stay ahead of security threats and can focus on driving business objectives.

UNIFIED SECURITY OPERATIONS, DELIVERED.

Consumed independently or as a full-service offering, the UltraViolet Cyber security–as–code platform continuously increases your cyber resilience.

Detection and Response
Detection-as-code delivered on a microservices cloud platform that moves at the speed of the adversary.

| Managed Detection Response (MDR) | Global Security Operations Center (GSOC) | Security Technology Management (STM) |

Continuous Threat Exposure Management
Validate every VM, CSPM, ASM, and APPSEC alert with word-class red teams before your resolver processes it.

| Penetration Testing as-a-service (PTaaS) | Red Team as-a-Service (RTaaS) | Vulnerability Management as a Service (VM) |

Dedicated Defense
Complete security program management to achieve your goals and objectives.

| Resource Based | Outcome Based | Custom Projects |

Adversaries are fast. Move faster with detection-as-code.

Gain the advantage of proactive and integrated security practices. Improve your ability to detect and respond to threats faster and more effectively. By creating an immediate as-code detection and response early in the escalation triage process, you'll accelerate your response while maintaining agility and efficiency.

Finally, proven security ROI and efficiency.

Unified security in a single ecosystem allows you to prove the speed at which you can convert potential exposures to monitored detections. With a proactive stance against potential threats, you can demonstrate a lowered MTTR, MTTD, and resolution time.

Close the gap between discovery and resolution.

When every alert from your VM, CSPM, ASM, and AppSec solutions is validated by a world class red team, your resolver groups have a smaller, curated focus, and know what to work on. The most important alerts get done first, providing protection against your biggest risk vectors.

UNIFYING OFFENSIVE & DEFENSIVE SECURITY
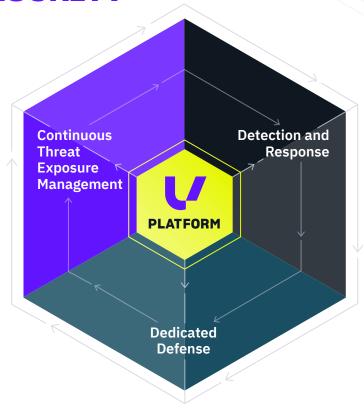

Continuous Threat Exposure Management

- ✔ Red Team as-a-Service (RTaaS)
- ✔ Penetration Testing as-a-service (PTaaS)
- ✔ Vulnerability Mangement as-a-service (VMaaS)

Detection and Response

- ✔ Managed Detection and Response (MDR)
- ✔ Detections-as-Code
- ✔ Global SOC Operations (GSOC)

Dedicated Defense

- ✔ Security Technology Management
- ✔ Cloud Security
- ✔ Dedicated Defense

Continuous Threat Exposure Management

Detection and Response

U PLATFORM

Dedicated Defense

Better Detection Logic

Reduce False Positives

Near Real-Time Detection

Microservices On-demand

Continuous Vulnerability Validation

WHY ULTRAVIOLET CYBER?

To continuously increase the cyber readiness and resilience of our clients.

Best-in-class security experts

Our industry experts have decades of experience implementing and operating SOCs for DHS and other security focused U.S. Government Agencies. Coupled with our NSA offensive pedigree, UltraViolet Cyber knows the adversary because we used to be the adversary.

Not your Dad's MSSP

Born in the cloud and led by automation, UltraViolet Cyber meets your business where it is today—and where it wants to go tomorrow. Flexible delivery models, whether co-managed, hybrid, or platform enabled make sure our clients get exactly what they need when they need it.

Partner not provider

We partner with our clients to deliver secure outcomes. We don't hide behind SLAs or service descriptions. We work with you to understand your environment and maximize your cyber spend to truly improve your cyber resilience.

ABOUT ULTRAVIOLET

U ultraviolet

UltraViolet Cyber is a leading platform enabled unified security operations company providing a comprehensive suite of security operations solutions. Founded and operated by security practitioners with decades of experience, the UltraViolet Cyber security-as-code platform combines technology innovation and human expertise to make advanced real time cybersecurity accessible for all organizations by eliminating risks of separate red and blue teams. By creating continuously optimized identification, detection, and resilience from today's dynamic threat landscape, UltraViolet Cyber provides both managed and custom-tailored unified security operations solutions to the Fortune 500, Federal Government, and Commercial clients. UltraViolet Cyber is headquartered in McLean, Virginia with global offices across the U.S. and in India.
